

## New Way of Thinking – UV Offset Printing Machine

Since 1890 we have been developing and manufacturing the perfect package for your products in Kirchberg near Bern, using a range of flexible materials. We continually strive to set milestones to best possibly meet your requirements.

Thanks to our experience, the highest standards of quality and our determination to be innovative, we create customized solutions which our customers find impressive.

In order to raise these standards we have gone a step further. In 2009 we will be the first company in Europe to offer all printing technologies under one roof. In addition to our UV flexo and roto gravure, a UV offset printing machine will also be available to cater to your needs.
